## **MEASUREMENT ILLUSTRATION UPDATE**

### **PROPOSAL**

To better depict real measurements taken on a boat, the illustration on IMS page 23 should delete mention of old measurements that are no longer necessary, such as SPS and CPW. Also, although it is only a diagram for illustration only, the measurement of SPL should be shown better.

### **RATIONALE**

Some measurements that are not in the IMS Editor software still appear in the IMS rules and this can cause confusion. Also, the measurement definition of SPL has changed and this does not yet appear in the IMS illustration.
