## **HHB MEASUREMENT**

### **PROPOSAL**

If ESP 4 is not supported, and thus IMS G2.2 is not deleted, then to apply the same concept of measuring MHB, or in the case of a batten over MUW, to measure HHB.

### **RATIONALE**

It is not very common, but we can find this sometimes on an HSF (Headsail Set Flying). If we apply this rule to mainsails, why not also to apply this to headsails?
