CRUISER/RACER COMPLIANCE STANDARDS

PROPOSAL

Achieve better compliance and conformity to C/R standards.

RATIONALE

IMS Appendix A describes what is needed for compliance to Cruiser/Racer standards, with one requirement being cockpit seating size based on crew size. This is not quantified and thus is subject to inconsistent interpretation by Measurers and Rating Offices.

For consistency we therefore suggest a standard for seat length to be integral values based on each crew being 0.5 m wide.

Furthermore, we suggest for unmeasured Club certificates that photos be required when needed to confirm to the rating office that the boat complies with C/R standards.
